STR Diagnostics

STR Data is processed following the receipt of new files at data@zartico.com. New files are released each Wednesday for the prior week's performance and are delayed one day for national holidays. Use this chart and the associated KPI to understand the most recent week processed and the number of rows received for each weekly file in our data warehouse. Changes in the number of rows should only occur if there is a change to the type of STR report received or the geographic breakdowns included in your report.
