The U.S. hotel industry entered the second half of the year from a position of relative strength, supported by healthy operating fundamentals, limited new supply growth, and sustained investor interest. While geopolitical uncertainty and elevated interest rates are part of the backdrop, performance across much of the sector has proven resilient. Revenue per available room, or RevPAR, increased 5.7% during the second quarter, with strong pricing power helping drive more than \$7 billion in additional room revenue during the first seven months of the year compared with the same period a year earlier. Occupancy gains have been supported primarily by weekday demand, reflecting improved corporate and group travel activity, while leisure demand has become increasingly segmented across chain scales. Luxury and upper-upscale hotels continue to outperform, benefiting from affluent travelers who remain willing and able to spend on higher-end experiences.

At the Hotel Data Conference in August, STR released its latest forecast. RevPAR this year is expected to grow 4.4%, driven by ADR growth of 3.1%. The 2027 RevPAR forecast shows 2.1% growth, but because of the “tough comps” in June and July growth will be more muted.

The development environment remains constrained. Elevated financing costs, persistent construction inflation, and increasingly selective capital markets continue to

weigh on project feasibility. As a result, hotel supply growth of 0.5% remains well below historical norms, and many projects are spending longer in planning stages before advancing to construction. New development is concentrated in limited-service segments, while several high-growth markets, including Nashville, Tampa Bay, Phoenix, Miami, and Detroit, continue to accumulate sizeable pipelines relative to existing inventory. Even so, national supply growth remains subdued and is expected to stay below long-term averages for the foreseeable future.

Investment activity has benefited from this backdrop of solid operating performance and limited supply growth. Hotel transaction volume has accelerated meaningfully over the past year, supported by strong investor demand for high-quality assets and an increasing number of properties coming to market as existing debt matures. Refinancing challenges, fund-life considerations, and the relative scarcity of new development opportunities are all contributing to deal flow. While marquee luxury assets continue to attract institutional capital, a large share of transactions remains concentrated among smaller properties purchased by regional investors. Looking ahead, industry participants generally expect favorable fundamentals, restrained supply growth, and active investment markets to support continued momentum through the remainder of the year

KEY INDICATORS

Average Trend	Current	3 Mo	YTD	12 Mo	Historical Average	Forecast Average
Occupancy	69.7%	68.3%	64.0%	62.9%	62.6%	
Occupancy Change	2.3%	1.5%	1.5%	0.1%	4.2%	
ADR	\$172	\$172	\$167	\$164	\$156	
ADR Change	5.7%	5.4%	3.9%	2.6%	8.4%	
RevPAR	\$120	\$117	\$107	\$103	\$98	
RevPAR Change	8.2%	7.0%	5.4%	2.7%	13.0%	

Geopolitical uncertainty notwithstanding, the U.S. hotel industry remained on solid footing through the first half of the year. Revenue per available room, or RevPAR, increased 5.7% in the second quarter, supported by a particularly strong June performance. July RevPAR rose 8.2%, driven by ADR growth of 5.7%. During the first seven months of the year, U.S. hotels sold 15 million more room nights and generated more than \$7 billion in additional room revenue compared with the same period a year ago.

Performance varied significantly by chain scale, underscoring the continued bifurcation in leisure spending. Luxury hotels posted RevPAR growth of 9.7% year to date, reflecting healthy demand and sustained pricing power at the upper end of the market. As affluent consumers continue to benefit from strong household balance sheets and asset values, spending on upscale travel remains resilient. By contrast, upper-midscale, midscale, and economy hotels have struggled to grow RevPAR and ADR meaningfully above inflation, creating pressure on profit margins.

Weekday demand continues to support occupancy growth, aided by the return of corporate and group travelers following the slowdown that followed the April 2026 tariff announcements. Weekend occupancy gains

have been more modest. July weekend occupancy increased just 0.7%, which may indicate that some price-sensitive leisure travelers are opting for alternative accommodations such as campgrounds or short-term rentals.

Segmentation data continues to point to robust demand and pricing momentum in luxury and upper-upscale hotels. Group room demand has grown in four of the past six months, while group ADR remains strong. The 8.3% increase in group ADR during July was likely supported by room blocks associated with the FIFA World Cup.

International inbound demand did not receive the expected lift from the World Cup games. When excluding Mexico and Canadian air travelers, the overseas traveler counts were down 1.2% in June.

Looking ahead, industry participants expect continued solid performance, particularly in major metropolitan markets and at the upper end of the pricing spectrum. Economic softness may weigh on limited-service demand, but as long as unemployment remains low, employed consumers are likely to continue allocating discretionary spending toward leisure travel.

(1) Percentage of Revenues for departmental expenses (Rooms, Food & Beverage, and Other Departments) are based on their respective departmental revenues. All other expense percentages are based on Total Revenue.

(2) Labor costs are already included in the operating expenses above. Amounts shown in Total Labor Costs are for additional detail only.

The higher-for-longer interest rate environment continues to weigh on U.S. hotel development activity. Rooms under construction have remained relatively flat at approximately 142,000 over the past year. U.S. hotel supply growth is expected to be approximately 0.4% in 2026, on par with the 0.4% increase recorded in 2025. Supply change remains well below the long-term average annual growth rate of 1.6%, a level that appears unlikely to be reached in the near term.

Elevated borrowing costs, combined with persistent inflation in construction materials and labor, have challenged project feasibility and forced many developers to revisit underwriting assumptions. As a result, projects are spending longer in the planning stages, and the number of rooms in both planning and final planning continues to decline. While some of this reflects projects advancing into construction, this likely also means that some projects are being delayed or shelved altogether.

Industry participants continue to report elongated development timelines. Although most projects are still scheduled to open three years after entering the active pipeline, that timeline has consistently extended, with expected opening dates regularly pushed further into the future. This means that the wall of new supply is consistently three years out.

As has been the case for much of the past decade, development activity remains heavily concentrated in the limited-service segment. In June, roughly 84,000 of the 142,000 rooms under construction were in the upscale, upper-midscale, and midscale chain scales. This concentration has remained remarkably consistent over time.

Among the Top 25 markets, Nashville, Tampa Bay, Phoenix, Miami, and Detroit have the largest active pipelines relative to existing inventory, based on rooms in final planning and under construction. In Nashville, Tampa Bay, Phoenix, Miami, and Detroit, future supply growth exceeds 10%, with Nashville approaching 16%, indicating a substantial increase in room inventory over the next three years. By contrast, Minneapolis and San Francisco have seen limited development activity. Even if their current pipelines are completed as planned, room inventory growth would total only about 2%.

Looking ahead, active pipeline counts are unlikely to change materially. We expect continued pressure on development activity as elevated financing costs constrain new project starts. At the same time, competing property sectors, particularly student housing and data centers, continue to attract significant investment capital, a trend that is likely to persist and further limit funding available for hotel development.

DELIVERIES & DEMOLITIONS

ROOMS DELIVERED

ROOMS DELIVERED BY CLASS

ROOMS UNDER CONSTRUCTION

TOTAL ROOMS UNDER CONSTRUCTION BY SCALE

ROOMS UNDER CONSTRUCTION BY SCALE

Despite elevated interest rates, U.S. hotel transaction activity remains strong. Over the past 12 months, hotel sales totaled approximately \$28 billion, up roughly \$7 billion year over year. Momentum accelerated in the second quarter, with transaction volume increasing 36% compared with the same period in 2025. Through the first half of the year, sales reached \$13 billion, exceeding the roughly \$10 billion recorded during the first six months of both 2024 and 2025.

Investor demand remains particularly strong for high-quality, full-service assets that benefit from both group and leisure demand. The recent sale of the JW Marriott Marco Island Beach Resort for \$835 million from Mass Mutual to Sculptor Real Estate and Trinity Investments illustrates continued appetite for trophy properties among institutional and private investors.

A portion of current transaction activity is being driven by maturing debt. As bank loans and commercial mortgage-backed securities approach refinancing, some owners face the prospect of injecting additional equity at a time when financing costs remain elevated. For owners

unable or unwilling to do so, a sale often becomes the most practical option. Brokers also point to fund-life considerations as a source of deal flow. Many funds launched around 2019 are approaching the end of their investment horizons, prompting asset sales as limited partners seek liquidity and capital redeployment.

The majority of transactions continue to occur below the \$50 million threshold, typically involving local or regional investors supported by community and regional banks. While luxury and upper-upscale hotels attract national and international capital, limited-service properties are more likely to trade off-market or among smaller buyer pools.

Looking ahead, investment activity is expected to remain healthy. Limited new hotel supply continues to constrain development opportunities, making existing assets more attractive to investors. Combined with solid operating performance during the first half of the year, these dynamics are expected to support transaction volume through year-end, with full-year sales likely to exceed 2025 levels.

SALES VOLUME & MARKET SALE PRICE PER ROOM

MARKET CAP RATE

The U.S. economy remained relatively resilient into the third quarter of 2026, despite continued disruptions stemming from the conflict in the Middle East. While military tensions eased earlier in the summer, shipping volumes through the Strait of Hormuz remain below normal levels, contributing to ongoing volatility in global energy markets. Energy prices have retreated somewhat from their peak levels earlier this year but remain elevated, and inflationary pressures continue as higher costs work their way through supply chains.

Trade uncertainty, softer government spending and a drag from inventory depletion dampened second-quarter economic growth, despite accelerating investment in AI-related equipment and software. Real GDP increased at a 1.5% annualized rate in the second quarter, down from 2.1% in the first quarter. However, private domestic demand has remained firm, suggesting that the economy continues to expand despite some headwinds.

Earlier this year, economic activity was expected to accelerate as fiscal stimulus measures took effect and larger-than-usual tax refunds supported household incomes. While those policies continue to provide some support, higher energy costs and persistent inflation have largely offset that benefit. However, business investment is beginning to expand beyond AI-related products and services, with expectations for stronger growth in the second half of the year and into 2027.

The labor market has slowed considerably. Nonfarm payroll employment declined by 23,000 in July, its first negative print in five months. However, the unemployment rate edged lower to 4.1% amid a shrinking labor force. The labor market remains

characterized by a low-hire, low-fire environment, with job openings holding at 7.4 million, the hiring rate near cycle lows, and claims for unemployment benefits remaining contained.

Higher-income households continue to drive consumer spending, supported by asset appreciation and relatively strong balance sheets. Lower-income households, by contrast, remain more dependent on wage income and continue to face pressure from higher borrowing costs and diminished savings. Credit card balances increased again in the second quarter, and the share of credit card balances in severe delinquency remains elevated. The divergence between these two segments continues to produce a K-shaped consumer economy.

Inflation has slowed from its cycle peak in 2022 but remains above the Federal Reserve's target. The June personal consumption expenditures (PCE) price index rose 3.7% from a year earlier, while core PCE increased 3.3%. More recent consumer price index data for July showed headline inflation easing to 3.4% year over year and core inflation falling to 2.5%, though inflation pressures remain elevated relative to the Fed's objective.

The Federal Reserve has kept its policy rate unchanged this year after lowering rates in the final meetings of 2025. While investors had anticipated additional rate cuts to support a weakening labor market, persistent inflation and energy-related price pressures have complicated that outlook. At its July meeting, the Federal Open Market Committee left rates unchanged, while several policymakers favored an increase, underscoring the challenges the Fed faces as it balances risks to the labor market against inflation that remains above target.
