The US hotel industry continues to post healthy growth despite an uncertain macroeconomic and geopolitical backdrop. April revenue per available room, or RevPAR, increased 4.4%, driven primarily by average daily rate, or ADR, growth of 2.5%. Year-to-date 2026 RevPAR rose 4.0%, putting the current RevPAR forecast of 0.6% is increasingly at risk to the upside, with an updated outlook to be released at the NYU IHIF conference in early June.

Performance by class remains strongest at the high end, but unlike last year, limited-service hotels also posted gains. Upscale and upper-midscale hotels each grew RevPAR by over 3% in the first four months. Economy-class hotels continue to lose ground, with demand declining 0.4% and ADR falling 1.6%.

Group demand increased 1.9% through April, masking a clearer acceleration later in the quarter. In March and April, group demand growth exceeded 3%. April marks the one-year anniversary of last year's tariff announcement, which weighed on corporate travel in 2025. As a result, group performance is expected to remain firm in the coming month, supported by comparatively easy year-over-year comps.

The FIFA World Cup across 16 North American markets remains a focal point for operators, though early enthusiasm has faded as FIFA has significantly reduced

its room blocks in match cities. The event is expected to generate strong rate growth but occupancy increases could be mixed. June may underperform expectations as smaller and less established teams struggle to mobilize traveling fan bases, while July and the single-elimination rounds should generate stronger ticket sales and RevPAR growth.

Roughly 25% of US hotels are now more than 50 years old, and the subdued development pipeline is unlikely to meaningfully alter that dynamic. Rooms under construction have remained near 140,000, and elevated interest rates and construction costs suggest little near-term upside. Limited-service projects account for about 70% of the pipeline. Luxury developments are proceeding, but typically require a condominium component, with units pre-sold before construction begins.

Hotel transaction activity strengthened in the first quarter, with asset sales up 26% year over year and five properties trading above \$100 million. Deal flow is expected to build further in 2026, particularly as high-end hotels continue to encounter minimal price resistance from guests. A notable transaction was the \$1.1 billion sale of two Four Seasons hotels from Host Hotels & Resorts REIT to Michael Dell's private investment firm, MSD.

KEY INDICATORS

Class	Rooms	12 Mo Occ	12 Mo ADR	12 Mo RevPAR	12 Mo Delivered	Under Construction
Luxury & Upper Upscale	1,307,082	67.3%	\$281	\$189	11,981	32,622
Upscale & Upper Midscale	2,468,613	66.7%	\$149	\$100	38,916	83,541

ADR Change	2.8%	3.0%	2.5%	1.2%	10.6%	1.7%
RevPAR	\$108	\$105	\$99	\$101	\$96	\$106
RevPAR Change	4.4%	4.9%	4.0%	0.5%	18.1%	1.8%

Macroeconomic conditions notwithstanding, the results through April were strong. In the months of February and April, respectively, more rooms were sold than in any other of those months, ever. At the same time, room revenue so far this year is around \$3 billion higher than a year ago.

Industry participants continue to feel quite optimistic about the forward-looking data and see the current healthy performance not as a blip but rather as a trend reversal. This is especially true because of the 'easy comps', since the last 3 quarters of 2025 showed negative RevPAR growth because of the impact of tariffs on corporate and leisure demand.

Looking ahead, we expect the RevPAR forecast to be restated well above 2% for the year.

Room demand through April grew 2%, a marked reversion from 2025 when 9 of 12 months reported demand declines. Also noteworthy is that in March, transient demand grew by 3.1% to over 18 million rooms, which is the strongest March transient demand ever recorded.

Class performance still shows bifurcation, but the more muted results in the limited-service classes seem to have reversed. Luxury class results grew by over 7% through April. RevPAR for upper upscale, upscale, and midscale properties grew by over 3%. The reason for this

healthy performance in the middle of the class-spectrum is likely that more American leisure customers are using at least some of their tax refunds to fund vacations. In addition, transient group demand numbers point to travel managers from large and medium-sized corporations eager to put their people back on the road.

The outbreak of the war in Iran did not hinder room demand, and so in turn room rates also grew. The ADR growth rate of 2.5% inches closer to the level of inflation, which could finally aid margin expansion.

Performance in the largest markets is skewed by one time events. Super Bowl comparables influence San Francisco and New Orleans data. The inauguration in Washington, D.C. last year skews the data for this year lower. And the surge of ICE agents in Minneapolis gave performance metrics in that market a Q1 bump up.

The World Cup in June and July will bring matches to 11 U.S. markets, along with five markets in Mexico and Canada. The impact is expected to be more rate-driven than demand-driven. RevPAR lift for the nation is expected to be closer to 40 basis points rather than the equivalent of "104 Super Bowls" as expected by the FIFA president in 2025. Market participants remarked that the FIFA room blocks did not materialize, and with continued strain on international inbound, many of the early-round matches will likely not fulfill their RevPAR promise.

(1) For Annual P&L, the current year exchange rate is used for each year going back in time. This current year exchange rate is the average of all 12 monthly rates for that year.

(2) Percentage of Revenues for departmental expenses (Rooms, Food & Beverage, and Other Departments) are based on their respective departmental revenues. All other expense percentages are based on Total Revenue.

(3) Labor costs are already included in the operating expenses above. Amounts shown in Total Labor Costs are for additional detail only.

Elevated borrowing costs, coupled with higher construction costs, against a backdrop of a muted revenue growth environment, continue to restrain U.S. hotel development. National supply expanded by just 0.5% through April, while the Top 25 markets posted room growth of only 0.4%. Near-term conditions suggest that hotel supply is unlikely to revert to its long-run average growth pace of 1.6%. As of April, approximately 140,000 rooms were under construction, a level meaningfully below the more than 150,000 rooms typically in the pipeline before 2025.

Momentum has also slowed at the front end of the pipeline. After two years of expansion, rooms in planning and final planning have declined, signaling fewer projects moving toward execution. This pullback indicates a tighter future supply outlook and reduces the probability of broad-based national supply pressure.

A handful of markets continue to diverge from the national trend. Nashville, Phoenix, Dallas, Miami and Denver each show combined under-construction and planned inventory consistent with potential supply growth exceeding 10% over the next several years. New York City also retains a sizable cohort of projects under construction, although the final planning stage remains thin following recent zoning changes. Proposed casino-

oriented hotels are not yet captured in active pipeline counts and are unlikely to deliver before 2030.

Development activity remains concentrated in limited service formats, which tend to support higher gross operating profit and EBITDA margins. Upscale and upper-midscale hotels account for roughly 70,000 rooms currently under construction, and close to three-quarters of all active development falls within the limited service segment. That share has remained broadly stable over the past decade.

Luxury development remains comparatively small in absolute terms, with about 6,500 rooms under construction. Even so, that volume equates to roughly 4% inventory growth, positioning luxury as the fastest-expanding chain scale. Many of these projects depend on branded residential components to achieve feasibility, with condominium sales frequently serving as an important source of construction equity.

Looking ahead, a significant reordering of core development markets appears unlikely. Southern and Southwestern states are expected to remain the primary areas of focus, supported by ongoing population growth and migration patterns.

DELIVERIES & DEMOLITIONS

ROOMS DELIVERED

ROOMS DELIVERED BY CLASS

ROOMS UNDER CONSTRUCTION

TOTAL ROOMS UNDER CONSTRUCTION BY SCALE

ROOMS UNDER CONSTRUCTION BY SCALE

Over the past 12 months, approximately \$24.6 billion in assets traded across more than 3,600 transactions, encompassing about 316,000 rooms. Deal counts remain well below prior-cycle peaks, yet aggregate dollar liquidity has recovered more meaningfully, pushing average deal size higher. This gap highlights a market in which capital remains available, especially on the debt side, but is being deployed into fewer transactions.

Pricing metrics reinforce a sharp bifurcation across asset classes and markets. Average sale prices per room sit just above \$110,000 nationally, but that figure conceals an exceptionally wide range. Economy and midscale assets frequently transact at prices well below \$50,000 per room, while trophy luxury hotels clear at valuations surpassing \$1 million per room. Cap rate behavior mirrors this dispersion. While national averages cluster near 9%, yields compress materially in high-barrier gateway, resort and coastal markets, even as secondary and tertiary markets continue to trade at double-digit cap rates. The coexistence of sub-7% cap rate luxury deals alongside deeply discounted distressed sales underscores how asset quality and location increasingly dominate price formation.

Luxury transactions in particular continue to command an outsized share of total dollar volume despite representing a small share of deal count. High-profile trades included the roughly \$750 million sale of the Four Seasons Resort Orlando, the \$350 million Four Seasons Jackson Hole transaction, and several large New York closings such as

The New York EDITION, The Dominick, and the InterContinental Times Square. Additional concentration occurred in Phoenix and Miami, where the JW Marriott Phoenix Desert Ridge traded for \$755 million and EAST Miami sold for \$300 million. These transactions concentrated capital into a narrow set of gateway cities, resort destinations, and brand-forward assets, reinforcing luxury hotels as the primary destination for large-check equity.

Meanwhile, midscale and economy properties continue to drive transaction volume by count but contribute a much smaller share of total dollars, reflecting lower valuations and a more operations-driven buyer pool. Institutional and private equity owners remain net sellers, often exiting large or non-core assets, while a fragmented set of buyers acquires assets at reset pricing. Foreign investment remains present but muted relative to prior cycles, and transactions continue to clear at meaningful discounts to asking prices, consistent with lengthening time-to-sale metrics.

Looking ahead, transaction patterns suggest a gradual and uneven recovery rather than a rapid market reopening. Capital is active but remains highly selective, favoring large, high-quality assets where pricing adjustments support long-duration holds. Debt markets are wide open and can be characterized in the words of one broker: “For every horse a saddle”, meaning that debt is available across the price spectrum for almost any borrower.

SALES VOLUME & MARKET SALE PRICE PER ROOM

MARKET CAP RATE

The U.S. economy remained relatively resilient into the second quarter of 2026, despite ongoing hostilities in the Middle East, which have sent energy prices surging and driven inflation higher. Yet heightened uncertainty about the duration and breadth of the disruption has dampened near-term expectations for economic growth.

Trade volatility and policy uncertainty through 2025 weighed on headline economic growth, exacerbated by the record-long government shutdown in the fourth quarter. However, underlying economic growth, excluding the volatile trade, inventories and government categories, showed a strong 2.4% reading in 2025, supported by resilient consumer spending and the acceleration of business investment in AI-related equipment and software, both of which have continued into 2026.

Higher-income households have been the driving force behind stronger spending, as equity and home price gains have boosted household wealth, providing a deeper cushion of spending power. Lower-income households, on the other hand, who are more dependent on earnings from work, have become more reliant on borrowing and drawing down savings, straining budgets as interest costs on debt have surged. Delinquency rates of credit card balances and personal loans, while no longer rising, have remained elevated. The dichotomy between the two household segments has resulted in a K-shaped consumer economy.

Job growth slowed significantly in 2025, adding only 116,000 positions during the year, the smallest number since 2003, outside of a recession. The job market has alternated between monthly job gains and losses since mid-2025, yielding a monthly average of roughly 12,000 jobs through March, but 115,000 jobs were added in April, breaking the monthly back-and-forth trend for the first time in 12 months. The unemployment rate remained

at 4.3% in April, having stayed within a narrow band since the middle of last year, as the slowdown in labor supply growth calls for fewer job gains to keep the unemployment rate from rising. The labor market has devolved into a low-hire, low-fire environment, with claims for unemployment benefits remaining contained and the hiring rate at a decade low. Businesses remain cautious amid continued uncertainty and slower demand.

Inflation has slowed from its cycle peak in 2022 but remains above the Federal Reserve's target. The personal consumption expenditures (PCE) price index for March showed inflation running at 3.5%, and the core index, which excludes food and energy prices, rose to 3.2%, driven higher by surging energy costs due to the Middle East conflict. Higher inflation readings are expected to endure through the coming months.

The Federal Reserve's policymaking committee has kept its policy rate unchanged so far this year after lowering it in each of the final three meetings in 2025. Markets had largely been expecting the Federal Reserve to reduce rates by 50 basis points this year to the neutral rate, the level that neither stimulates nor inhibits economic activity. However, given elevated inflation risks from higher energy prices, analysts are now considering the possibility that the policy rate will move higher either later this year or early next year.

The near-term outlook had been for economic activity to accelerate this year as the expansionary provisions of the One Big Beautiful Bill Act take effect and larger-than-usual tax refunds were distributed to households this spring. However, the increase in energy costs has largely offset any boost to household incomes. As a result, projections for economic growth in 2026 have been downgraded, reducing 2026 growth forecasts to 2.2% before reaccelerating in 2027.

(1) Completed transaction data is based on actual arms-length sales transactions and levels are dependent on the mix of what happened to sell in the period.

(2) Market price trends data is based on the estimated price movement of all properties in the market, informed by actual transactions that have occurred. The price index is not smoothed.
